SD ALL-TERRAIN TRESTLE SYSTEM

AUSTIN
LADDERS
WHITE

The LSD All-Terrain Trestles are the ONLY trestles specifically designed for use indoors and outdoors and on ground that is seriously uneven.

Each of the four trestle legs is adjustable over 600mm (2ft) in increments of 3mm (1/8") which enables them to be levelled both easily and quickly, and on a severe slope. Each leg has a 125mm (5") diameter foot with a universal joint that can cope with any angle.

The Trestles provide a working platform height from 300mm (12") to 2,400mm (8ft) and fold flat for storage.

Another first is our completely new three metre (10ft) Staging Board which, uniquely, has our own claw clamp welded into each stile and clamps onto the trestle rungs.

A further 'first' is the integral LSD Handrail System which provides a safe and secure work platform. The handrail folds down flat when not in use and consists

of a one metre high handrail with 500mm mid rail. Telescopic extenders emerge to cover the full length of the board in use, and if working in a confined space the trestles can be turned through 180° so that the board is overhanging the rung.

For the first time a safe secure platform with integral handrails is available. Because the Staging Board is clamped to the trestle, the board cannot tip.

The system is very light. Each Trestle weighs 11kg, the board weighs 25kg.

The LSD Staging Board complies with BS 2037 Class 1 and has a Safe Working Load (SWL) of 270kg.

PAIR OF TRESTLES + 3 METRE BOARD

only £499 + VAT (Also available separately)
